CHANGING RECYCLING FOR THE BETTER

Green Stream Recycling is changing the way Long Island recycles. In 2014, the Brookhaven, New York-based company partnered with Green Machine to construct the most advanced recycling system on Long Island.

Green Stream selected Green Machine, based in Hampstead, New Hampshire, to design, build and install a new recycling system that serves as the cornerstone for improving recycling on Long Island.

“Our goal was to increase recycling rates on Long Island,” says Will Flower, president of Green Stream Recycling. “We needed to develop the recycling infrastructure on Long Island and we found a great partner with Green Machine. The team at Green Machine was easy to work with—they listened to us and helped us develop a cost-effective and environmentally sound solution which met our needs.”

The recycling system replaced an older system that was installed in the Brookhaven Material Recovery Facility in 1991. The new Green Machine equipment facility quadrupled the recycling plant’s capacity as well as quadrupled the processing capabilities of the plant.

“Green Machine designed and installed the system under a very tight and demanding schedule,” says Kenny Bloom, facility manager for Green Stream. “In just over three months we were able to start up operations and today we are processing large volumes of material. More importantly, we are producing high-quality recyclables that our buyers and mills want.”

Flower adds, “Green Machine has helped lead the recycling revolution on Long Island. We really needed to move fast and Green Machine was with us every step of the way.”

With the Green Machine system in place, Long Island has unparalleled processing capabilities in the region while producing high-quality products for manufacturers. And the results are impressive, Green Stream says. Since the start of the new recycling program in Brookhaven, recycling rates have increased by 24.6 percent. Financially, the Town of Brookhaven reported that it has saved more than \$250,000 in avoiding disposal costs in just a few months.

The bottom line is that single stream makes recycling easier for residents to recycle and the Green Machine makes it easier for us to process the recyclables that are placed at the curb each week, the company says.

“We have been continually impressed with Green Machine especially the ‘after installation’ support,” Flower says. “Green Machine built a great system but then helped us through start-up and was with us every step of the way. Any operational issues were quickly addressed and corrected as we worked our way through start-up and into full operation.” ■
